New production line for open-head steel drums at the Houston site

SCHÜTZ Container Systems (SCS) is expanding its steel drum plant in Houston (USA) for the production of open-head steel drums. This addition to our product and service portfolio lets local customers benefit from a fully comprehensive range of new and reconditioned IBCs, PE and steel drums.

The factory in Pasadena, Texas, is SCHÜTZ's fifth steel drum plant worldwide; in 2016, it was the first new steel drum production facility in the United States in more than 20 years. Until now, we have produced both lined and unlined tight-head steel drums with a variety of material thicknesses to meet various UN performance requirements. The range is now being expanded to include open-head steel drums. In the ultra-modern plant, open-head steel drums can also be customized by adding decoration to the body of the drum through screen printing. The expansion enables even greater supply security and maximum flexibility. Customers in the region can now purchase

100% of their steel drum requirements with our full product offering on steel drums.

The SCHÜTZ production site is conveniently located just outside the city of Houston. The region is dominated by the oil and gas, chemical and petrochemical industries, making it one of the most dynamic markets for industrial packaging in the USA. Our plant has a direct link to the rail network as well as convenient access to the I-45 and I-10 highways, which gives us exceptional transport flexibility for raw materials and the ability to ship out finished products in an environmentally friendly manner.

The expansion enables even greater supply security and maximum flexibility.
